eScene.09 – Incident Location Type

The code list associated with eScene.09 (Incident Location Type) represents a list of values found in the 10th revision of the International Classification of Diseases – Clinical Modification (ICD-10-CM). The process for gaining access to the ICD-10-CM code values is provided below.

The documentation of eScene.09 (Incident Location Type) is based on the definition: the type of location where the EMS Unit responded for this specific EMS event.

Suggested List

The suggested code list for eScene.09 (Incident Location Type) of 53 values is represented in ICD-10-CM: Chapter XX, Y 90-98 Supplemental Factors Related to Causes of Morbidity Classified Elsewhere within the Y92 Place of Occurrence Codes section.

Officially any Y92 codes can be submitted based on the Y92 pattern. The suggested code list is a trimmed down list identified to meet the majority of needs of EMS across the nation. Some states may identify additional activities for inclusion.

Licensed “Suggested Lists”

The U.S. National Library of Medicine provides access to the ICD-10 code values through the Unified Medical Language System (UMLS). An applicant must accept the terms of the UMLS Metathesaurus License and create a UMLS Terminology Services (UTS) account for access to UMLS datasets and terminology browsers. More information can be found at: <http://www.nlm.nih.gov/databases/umls.html>.

The NEMSIS TAC may only distribute suggested lists with specific value codes from the UMLS system to entities licensed through the UMLS system. Thus, each software developer must seek licensing and provide proof of licensing before gaining access to all of the pre-defined suggested lists available through the NEMSIS TAC.

Access to “Suggested List” Archive Files

Access to suggested code lists will be provided on a special section of the NEMSIS TAC’s SharePoint site. A licensed user will be able to login to the SharePoint site and download the appropriate archive file (ICD-10-CM).

The UMLS license verification service helps determine if the remote user has a license to use and/or distribute certain code sets. If the user does not have a current license, access to the “suggested lists” archive is denied.

The “suggested list” files will be zipped archives that are automatically created each time one of the licensed code databases is updated in the NEMSIS master data repository.

Viewing and Using the “Suggested List” Archive Files

The downloaded suggested list appears in a pipe-delimited text format. The proper code to utilize is the code with the name of the element and closest to the value description. Please note that the CUI, AUI, and TTY fields are included for reference purposes. These codes allow one to locate the exact code and description in the UMLS Metathesaurus that was selected for inclusion in the suggested list.

All lists, including non-UMLS, provide additional fields indicating when a record became active in the NEMSIS TAC’s master data repository as well as the version of the source used for a particular code and description in the suggested list.

Conclusions

By maintaining a single source of this data and making it available internally as well as to our customers, we improve our data quality and consistency. This will reduce reporting errors in data submissions provided it is used as part of our own and our customer’s data management best practices.

Unified Medical language System (UMLS) Term Types (TTY)

This is a partial list of Term Types in Source (TTY) from the National Library of Medicine website. The NEMESIS TAC will be using primarily the designated preferred name (PT) and occasionally the hierarchical term (HT) Term Types in its suggested lists. To view the full list of UMLS abbreviations used in data element please visit the National Library of Medicine website:

http://www.nlm.nih.gov/research/umls/knowledge_sources/metathesaurus/release/abbreviations.html .

TTY (Term Type in Source)		TTY (Term Type in Source)	
DN	Display Name	HT	Hierarchical term
DO	Domain	LT	Lower Level Term
ET	Entry term	PT	Designated preferred name
HC	Hierarchical class	RT	Designated related term
HD	Hierarchical descriptor		

ICD-10 CM Suggested List for eScene.09 Incident Location Type

The 53 suggested incident location descriptions listed below are ordered based on the Example EMS Descriptor. The appropriate ICD-10-CM term type (TTY) code is identified for each incident location description.

Please note: The descriptors in the “Example EMS Descriptor” column have had the ICD-10-CM phrase “as the place of occurrence of the external cause” removed from the ICD-10-CM Description as possible EMS friendly language incident location documentation purposes.

The June 6, 2013 update provides the column to the right in a light red background to identify examples EMS friendly vocabulary and options for training purposes. The “Example EMS Descriptor” column includes terminology that may be used by the EMS community in place of the official health care data standard description. Please note neither the official code nor description has been changed. The backend code and description remain that of the health care data standard for the element. This is true at the NEMESIS TAC and for EMS software development companies and their products. The EMS terminology is derived from the health care data standard and has not changed the meaning of the description. Where possible a data standard synonym is used. This information may be used for EMS training purposes or implemented in the EMS software used by EMS.

ICD-10 CM Suggested List for eScene.09 Incident Location Type

	TTY Code	ICD-10-CM Code	ICD-10-CM Description	NEMSIS Version 3 - Incident Location Type Explanation of Inclusion or Clarification Clar: Clarification or example of potential use. SYN: The ICD-10-CM synonym for the description.	NEMSIS Version 3 - Incident Location Type Example EMS Descriptor
1	PT	Y92.520	Airport as the place of occurrence of the external cause		Airport
2	PT	Y92.530	Ambulatory surgery center as the place of occurrence of the external cause	SYN: Ambulatory surgery center as place.	Ambulatory surgery center
3	PT	Y92.831	Amusement park as the place of occurrence of the external cause	SYN: Amusement park as place.	Amusement park
4	HT	Y92.03	Apartment as the place of occurrence of the external cause	SYN: Condominium as the place of occurrence of the external cause.	Apartment
