eSituation.12 - Provider's Secondary Impressions

The code list associated with eSituation.12 (Provider's Secondary Impressions) represents a range of values found in the 10th revision of the International Classification of Diseases – Clinical Modification (CD-10-CM). The process for gaining access to the ICD-10 CM code values is provided below.

Suggested List

The suggested code list for eSituation.12 (Provider's Secondary Impressions) is represented in the ICD-10-CM ranges listed in the table below. The specific [163](#) suggested ICD-10-CM codes are listed at the end of this document, beginning on page four.

In order to capture the majority of the ICD-10-CM Codes within the NEMSIS Version 3 dataset, the range of codes (and corresponding XSD patterns) have been extended for the Impression elements (eSituation.11 - Provider's Primary Impression & eSituation.12 - Provider's Secondary Impressions). [The range now includes the R Signs and Symptoms codes to meet the needs of EMS in the pre-hospital setting. The NEMSIS TAC recommends a limited use of R codes where possible. A total of 11 R Codes have been added to the provider impression suggested list.](#)

[Based on the NEMSIS Version 3.3.1 dataset the ICD-10-CM codes used to document the EMS professional's provider impression may allow the general section code. No longer is it a requirement for the codes to incorporate at minimum one \(1\) decimal point. In order to allow for specificity of the impression description the EMS professional may document out to four characters following the decimal. For example, D49 Neoplasms of unspecified behavior \[EMS Use: Cancer, unspecified\], is now allowed.](#)

In the case of an injury to a lower leg the EMS professional may be more specific and document S89.91XA (Unspecified injury of right lower leg, initial encounter) to provide further level of detail.

The ICD-10-CM Range for inclusion in the NEMSIS Version 3 Provider Impression codes:

ICD-10-CM Range	ICD-10-CM Chapter & Description
A00-Q99.9	<u>Chapters I through XVII:</u> Ch I. Certain infectious and parasitic diseases; Ch II. Neoplasms; Ch III. Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism; Ch IV. Endocrine, nutritional and metabolic diseases; Ch V. Mental and behavioral disorders; Ch VI. Diseases of the nervous system; Ch VII. Diseases of the eye and adnexa; Ch VIII. Diseases of the ear and mastoid process; Ch IX. Diseases of the circulatory system; Ch X. Diseases of the respiratory system; Ch XI. Diseases of the digestive system; Ch XII. Diseases of the skin and subcutaneous tissue; Ch XIII. Diseases of the musculoskeletal system and connective tissue; Ch XIV. Diseases of the genitourinary system; Ch XV. Pregnancy, childbirth and the puerperium; Ch XVI. Certain conditions originating in the perinatal period; Ch XVII. Congenital malformations, deformations and chromosomal abnormalities
R00-R69 and R99	<u>Sections of Chapter XVIII: Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified</u>
S00-T88.9XXS	<u>Sections of Chapter XIX: Injury, poisoning and certain other consequences of external causes</u>
Z00-55-Z99.89	<u>Sections of Chapter XXI: Factors influencing health status and contact with health services</u>

Licensed “Suggested Lists”

The U.S. National Library of Medicine provides access to the ICD-10-CM code values through the Unified Medical Language System (UMLS). An applicant must accept the terms of the UMLS Metathesaurus License and create a UMLS Terminology Services (UTS) account for access to UMLS datasets and terminology browsers.

More information can be found at: <http://www.nlm.nih.gov/databases/umls.html>.

The NEMSIS TAC may only distribute suggested lists with specific value codes from the UMLS system to entities licensed through the UMLS system. Thus, each software developer must seek licensing and provide proof of licensing before gaining access to all of the pre-defined suggested lists available through the NEMSIS TAC.

Access to “Suggested List” Archive Files

Access to suggested code lists will be provided on a special section of the NEMESIS TAC’s download site. A licensed user will be able to login to the site and download the appropriate archive file (RxNorm, ICD-10, etc).

The UMLS license verification service helps determine if the remote user has a license to use and/or distribute certain code sets. If the user does not have a current license, access to the “suggested lists” archive will be denied.

The “suggested list” files will be zipped archives that are automatically created each time one of the licensed code databases is updated in the NEMESIS master data repository.

Viewing and Using the “Suggested List” Archive Files

The downloaded suggested list appears in a pipe-delimited text format. The proper code to utilize is the code with the name of the element and closest to the value description. Please note that the CUI, AUI, and TTY fields are included for reference purposes. These codes allow one to locate the exact code and description in the UMLS Metathesaurus that was selected for inclusion in the suggested list.

The list provides additional fields indicating when a record became active in the NEMESIS TAC’s master data repository as well as the version of the source used for a particular code and description in the suggested list.

Conclusions

By maintaining a single source of these data and making it available internally as well as to our customers, we improve our data quality and consistency. This will reduce reporting errors in data submissions provided it is used as part of our own and our customer’s data management best practices.

Unified Medical language System (UMLS) Term Types (TTY)

This is a partial list of Term Types in Source (TTY) from the National Library of Medicine website. The NEMESIS TAC recommends, and will be using primarily the designated preferred name (PT) and occasionally the hierarchical term (HT) Term Types in its suggested lists. To view the full list of UMLS abbreviations used in data element please visit the National Library of Medicine website:

http://www.nlm.nih.gov/research/umls/knowledge_sources/metathesaurus/release/abbreviations.html .

TTY (Term Type in Source)		TTY (Term Type in Source)	
DN	Display Name	HT	Hierarchical term
DO	Domain	LT	Lower Level Term
ET	Entry term	PT	Designated preferred name
HC	Hierarchical class	RT	Designated related term

ICD-10 CM Suggested List for eSituation. 12 Provider's Secondary Impressions

The suggested ICD-10-CM Impression descriptions listed below are ordered based on the ICD-10-CM code. Please note the associated Impression Category in the [last](#) column. The appropriate term type (TTY) code is identified for each description. [The Provider Impression excel spreadsheet is separated into three worksheets where the suggested list is ordered by 1\) ICD-10-CM Code; 2\) Impressions Category or Intent; and 3\) EMS Descriptor to Use.](#)

The June 5 2013 update provides the columns to the right in a light red background to identify examples EMS friendly vocabulary and options for training purposes. The “Example EMS Descriptor” column includes terminology that may be used by the EMS community in place of the official health care data standard description. Please note neither the official code nor description has been changed. The backend code and description remain that of the health care data standard for the element. This is true at the NEMSIS TAC and for EMS software development companies and their products. The EMS terminology is derived from the health care data standard and has not changed the meaning of the description. Where possible a data standard synonym is used. This information may be used for EMS training purposes or implemented in the EMS software used by EMS.
