Comment

Not precise. v2 defines as the highest level of service available for every call. v3 defines as the minimum level of service for every call. The definitions are equivalent, but the v2 definition was probably misinterpreted in many cases.

v2 also includes DescriptiveText, which is a string of length 2 to 100.

v2 allows length 2 to 30 and specifies the use of FIPS. v3 allows any Positive Integer and specifies the use of GNIS. To add mappings, add entries to v2v3ValueMappingvCity or load them from files downloaded from the "State Files with Federal Codes" section at http://geonames.usgs.gov/domestic/download_data.htm . If multiple mappings exist for a FIPS code within a state, priority is given to codes with a census class code that starts with "C", then "P".

v2 allows length 2 to 30 and specifies the use of FIPS. v3 allows any Positive Integer and specifies the use of GNIS. To add mappings, add entries to v2v3ValueMappingvCity or load them from files downloaded from the "State Files with Federal Codes" section at http://geonames.usgs.gov/domestic/download_data.htm. If multiple mappings exist for a FIPS code within a state, priority is given to codes with a census class code that starts with "C", then "P".

v2 allows length 2 to 30 and specifies the use of FIPS. v3 allows any Positive Integer and specifies the use of GNIS. To add mappings, add entries to v2v3ValueMappingvCity or load them from files downloaded from the "State Files with Federal Codes" section at http://geonames.usgs.gov/domestic/download_data.htm. If multiple mappings exist for a FIPS code within a state, priority is given to codes with a census class code that starts with "C", then "P".

Maps from FIPS 10 (now GEC) to ISO 3166. FIPS 10 is now maintained by National Geospatial-intelligence Agency (<http://earth-info.nga.mil/gns/html/gazetteers2.html>) as Geopolitical Entities and Codes (GEC). Data for mapping retrieved from CIA World Factbook, Appendix D (<https://www.cia.gov/library/publications/the-world-factbook/appendix/appendix-d.html>), August 16, 2013. The CIA source was chosen because it incorporates updates issued by NGA, whereas the NGA source only provides the updates as separate files. v2 allows length 2 to 20. v3 requires length 2.

Some ICD-9 code references are incorrect in v2. See <http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/clm104c15.pdf>, pg 51-63, for correct codes. In both v2 and CMS, the labels do not match the standard labels for the ICD-9 codes on which they are based. This mapping is done based on generally available ICD-9 to ICD-10 code mapping resources and does not attempt to find the best matching ICD-10 codes for the CMS or v2 labels.

v2 allows length 2 to 30 and specifies the use of FIPS. v3 allows any Positive Integer and specifies the use of GNIS. To add mappings, add entries to v2v3ValueMappingvCity or load them from files downloaded from the "State Files with Federal Codes" section at http://geonames.usgs.gov/domestic/download_data.htm. If multiple mappings exist for a FIPS code within a state, priority is given to codes with a census class code that starts with "C", then "P".

v2 allows length 2 to 30 and specifies the use of FIPS. v3 allows any Positive Integer and specifies the use of GNIS. To add mappings, add entries to v2v3ValueMappingvCity or load them from files downloaded from the "State Files with Federal Codes" section at http://geonames.usgs.gov/domestic/download_data.htm. If multiple mappings exist for a FIPS code within a state, priority is given to codes with a census class code that starts with "C", then "P".
