eSituation.09 - Primary Symptom

The code list associated with eSituation.09 (Primary Symptom) represents a range of values found in the 10th revision of the International Classification of Diseases – Clinical Modification (CD-10-CM). The process for gaining access to the ICD-10 CM code values is provided below.

Suggested List

The suggested code range for eSituation.09 (Primary Symptom) is represented in ICD-10-CM. Signs and Symptoms are contained throughout the ICD-10-CM list. The primary documentation for symptom should be based on the "general" list of R Codes.

The acceptable ICD-10-CM code ranges for Symptoms include:
- Symptoms, Signs and Ill-defined and Unknown Cause of Mortality (R00.0-R69, R73.9, and R99)
- A-Q, S, T, and Z.

The specific 152 suggested ICD-10-CM coeds are listed at the end of this document, beginning on page four. The suggested code list for the symptom description includes multiple columns including an "Explanation of Inclusion or Clarification" which may provide additional information related to the code description. The symptom suggested list information now contains Category and Sub-Category columns based in part on the ICD-10-CM sections. These hierarchies have been created to provide categories for the multiple symptoms available within the ICD-10-CM and NEMSIS Version 3 dataset.

The other ICD-10-CM R codes, not listed in the range above, will not be utilized in the NEMSIS Version 3 dataset as they do not pertain to EMS in the traditional pre-hospital (911) environment.

Licensed "Suggested Lists"

The U.S. National Library of Medicine provides access to the RxNorm code values through the Unified Medical Language System (UMLS). An applicant must accept the terms of the UMLS Metathesaurus License and create a UMLS Terminology Services (UTS) account for access to UMLS datasets and terminology browsers.

More information can be found at: http://www.nlm.nih.gov/databases/umls.html.

The NEMSIS TAC may only distribute suggested lists with specific value codes from the UMLS system to entities licensed through the UMLS system. Thus, each software developer must seek licensing and provide proof of licensing before gaining access to all of the pre-defined suggested lists available through the NEMSIS TAC.

Access to "Suggested List" Archive Files

Access to suggested code lists will be provided on a special section of the NEMSIS TAC's SharePoint site. A licensed user will be able to login to the SharePoint site and download the appropriate archive file (RxNorm, ICD-10-CM, etc).

The UMLS license verification service helps determine if the remote user has a license to use and/or distribute certain code sets. If the user does not have a current license, access to the "suggested lists" archive will be denied.

The "suggested list" files will be zipped archives that are automatically created each time one of the licensed code databases is updated in the NEMSIS master data repository.

Viewing and Using the "Suggested List" Archive Files

The downloaded suggested list appears in a pipe-delimited text format. The proper code to utilize is the code with the name of the element and closest to the value description. Please note that the CUI, AUI, and TTY fields are included for reference purposes. These codes allow one to locate the exact code and description in the UMLS Metathesaurus that was selected for inclusion in the suggested list.

The list provides additional fields indicating when a record became active in the NEMSIS TAC's master data repository as well as the version of the source used for a particular code and description in the suggested list.

Conclusions

By maintaining a single source of these data and making it available internally as well as to our customers, we improve our data quality and consistency. This will reduce reporting errors in data submissions provided it is used as part of our own and our customer's data management best practices.

Unified Medical language System (UMLS) Term Types (TTY)

This is a partial list of Term Types in Source (TTY) from the National Library of Medicine website. The NEMSIS TAC will be using primarily the designated preferred name (PT) and occasionally the hierarchical term (HT) Term Types in its suggested lists. To view the full list of UMLS abbreviations used in data element please visit the National Library of Medicine website: http://www.nlm.nih.gov/research/umls/knowledge_sources/metathesaurus/release/abbreviations.html .

ICD-10-CM Suggested List for eSituation.09 Primary Symptom

The suggested ICD-10-CM Symptom descriptions listed below are in alphabetical order based on the ICD-10-CM code. Please note the associated Symptom Category and Sub-Category. The Symptoms excel spreadsheet is separated into three worksheets where the suggested list is ordered by 1) ICD-10-CM Code; 2) Symptom Category and then Sub-Category; and 3) EMS Name to Use. The "EMS Name to Use" column contains possible recommendation(s) by the NEMSIS TAC for use by EMS Software Companies, State EMS Offices, EMS Agencies, and EMS professionals.

Please note: the descriptors in italics in the "EMS Name to Use" column have the same descriptions as the ICD-10-CM code description.
